

## Product information - Parasols

### Aluline

The aluminium parasols are available in different sizes and colours. Round Ø 350 and in 330x330 cm. Aluminium profiles powder-coated in stainless steel colours as well as aluminium powder-coated charcoal with 2-part mast. The Aluline shade closes upwards. A telescopic function ensures that the tables are kept clear, as the tables do not have to be cleared or moved for the umbrella to close.

The removable cover is made of a new spinneret-dyed fabric of 100% polyester, with very high lightfastness and very high UV protection UPF50+. It is also dirt-repellent and rot-resistant. The self-tensioning, flexible strut ends always keep the cover in shape and the elegant leather pockets lend a noble character. All covers have the proven wind ventilation. This significantly increases the stability in windy conditions, gusts can escape through the cover.

### Woodline

The wooden pole parasols have proven themselves for many years as perfect and aesthetic sun protection. Unique in form and quality are the Sunset and Pendulum free-arm parasols, which are also available in aluminium. The size goes from round Ø300 up to 530cm.

The parasols offer excellent wind ventilation. The material, glued eucalyptus wood, is protected against torsion. The removable covering is a 285 g/m<sup>2</sup> polyacrylic covering with light fastness level 6 and Teflon coating. For unfolding, we use a smooth-running 4-fold cable pull.

### Free-arm parasols
